We Can Do It...Together!

“We pass the final state-administered CNA test after this program takes a lot of hard work. In the beginning, several participants said they wouldn’t take the test again if they failed the first time. But they worked through this mindset together and decided to say, ‘I’ll take the test until I pass!’

One of the graduates passed her CNA test first but still came back for the skills review session to help the others. This moment was such a great example of the group support that happens at CLIMB. Even outside of the program, they provided meals and helped each other with childcare. They started as strangers but were a family by the end.”

— Molly Kruger, Cheyenne Program Director

“I have always wanted to be a CNA but never had the time or money to do so being a single mom. Working retail overnights, trying to be at [CLIMB] training at 8 a.m. was tough, but with the support of CLIMB, I did it!”

— Rebecca, Program Participant
